**Bid More**

**Manage More**

**Be more Profitable**

**Watch your ROI**

**Coming Soon to our software:**

- TimeClock
- QuickBooks interface
- CabinetVision interface
- Version 2.6

**Estimate Tip:**

No project is too big to estimate when you takeoff one room at a time

**Software Tips:**

Copy one project to another, then revise specs to produce an alternate material price for Value Engineering .

**Library**

**Suggestions:**

-Combine spec tab items for a more versatile Library. i.e. Cabinet plus face frame

**Terminology:**

LEED credits are easy to track if you initially set up your material library. Upon completion of estimate , click and see the report.

**Metric Conversion:**

1" = 25.4mm  
120" = 3048mm  
48" = 1220mm

**Business Opps:**

-Experience estimators  
-Independent Sales Reps

## Prime6400 release Version 2.4.1 with 20 new features

Prime announces the release of Prime6400 Version 2.4.1, a Windows based estimating software for the Architectural Woodwork, Millwork and Casework industry. Designed by an estimator for estimators that allows you to bid that important project by 2:00pm tomorrow afternoon efficiently and accurately.

With this new release, the estimator has now 6 different ways to complete pricing for the projects that typically have a combination of box casework and Special/Custom work:

- Material Library
- Standard Library with parametric pricing
- Special Library with quantity generator
- Special Library from Standard Library and modify
- Special Library from similar Special Library for this project
- Special Library copy/add/edit from similar Special Item Library for any project

Regardless how you perform your pricing, a complete reporting of raw materials and labor task hours are provided. In additional, assembly and part numbers are maintained for use when exporting to other softwares like Sage Master Builder, Microvellum and more.....

Other features included in this release are Work Order & Packing Slip forms, replace Material Code & Item Code by project, dimension input for copy from Standard Library, input of General Note with each Special Item, input for project address

or extra description, Quantity Generator for Takeoff quantities, Scope Letter header for Alternates, QCP/GIS selection for project quality standard, archive unsuccessful projects and more.....

With regards to any estimating software, Users have the option of a machinery based software and an estimate that is the residual of the manufacturing. Or **Contractor based** as is Prime6400 to allow the User to respond quickly to the surprising demands of the Contractor. This includes Value engineering, price breakdown by area or phase, separate prices, alternate prices and more.

Other issues that set Prime6400 ahead include OCIP rates, prevailing wages, union/non-union rates, sales taxes by various states requirement, QCP/GIS rates, sub trades, general conditions, email scope letters.

In summary Prime6400 has all tools to secure that contract. Yet with reporting and export capabilities, it can communicate with the other 3rd party software.

Please call or email to-day to arrange your online live demonstration to-day
